

## The Prince Akatoki London: The dawn of a new era in hospitality technology

Nonius delivered a set of products that provide an unforgettable experience during the entire digital guest journey of [The Prince Akatoki London's](#) guests.

From [Online Check-in](#) before arriving at the hotel, to an [App](#) with all information about the hotel and its services, a [high-speed Internet access](#) throughout the hotel, a [TV](#) offer that has engaging and entertaining content, and a [Chromecast](#) feature that allows guests to see their own content in the convenience of their room.

Nonius and The Prince Akatoki London have worked closely to get fully customised products, specially developed for this hotel, according to its brand standards. The user interfaces for the hotel app, TV system and [Wi-Fi landing page](#) were specially built for this hotel, in several languages, including Chinese and Japanese. Nonius' team also provided and deployed the network infrastructure for the Wi-Fi, cabling and switching.

All of these systems are monitored through a cloud-based dashboard available for the property's IT & management team to track the status of the Guest Technology Services and provides analytics on status, usage and statistics of all products used by guests.
